SIDDHARTH GHATUARY

Software Engineer 1 | Python • SQL • Automation
siddharth.ghatuary.id@gmail.com | +91 9304558728 | GITHUB | LINKEDIN | HACKERRANK

SUMMARY

Software Engineer 1 with production experience building automated data systems and enterprise reporting solutions using Python, SQL, and modern BI platforms. Proven track record designing scalable reporting pipelines, automating manual workflows, and delivering executive-facing dashboards in a large healthcare enterprise environment. Strong foundation in software engineering, workflow automation, and data-driven problem solving.

SKILLS

- **Programming & Querying:** Python | Advanced SQL | Shell Scripting | REST APIs
- **Databases:** MySQL | PostgreSQL
- **Version Control & Automation:** Git | CI/CD | Workflow Automation
- **Data Visualization & Reporting:** Tableau
- **Healthcare Analytics Tools:** Power Insight | DA2 | CCL
- **Soft Skills:** Effective Communication | Problem Solving | Strategic Thinking | Stakeholder Collaboration | Decision-Making Support

EXPERIENCE

Oracle | Software Engineer I (Healthcare) | October 2023 – Present

- Automate recurring healthcare-reporting workflows and build reusable internal Python tools/scripts for the team, reducing manual effort and improving delivery consistency across 100+ production reports.
- Engineer production-grade GUI reports and backend data pipelines using Python, SQL, DA2, and Power Insight (leveraging CCL for legacy systems) to support hospital clinical and operational workflows.
- Write advanced, performance-tuned SQL queries and data-transformation logic to ensure accuracy, integrity, and scalability across enterprise reporting systems.
- Build interactive dashboards and data visualizations in Python and Tableau for hospital executives, turning raw clinical and operational data into decision-ready insights for patient care management.
- Maintain 90% SLA adherence while closing the highest volume of report requests on the team; recognized 4 times for outstanding performance; partner directly with hospital stakeholders and clinical teams to translate requirements into production systems.
- Lead technical knowledge-sharing sessions (5+ demos) on Python automation and reporting best practices; undergoing advanced training in HealtheIntent Business Analytics and Oracle Analytics Cloud (OAC).

Analytic Edge | Python Developer Intern | August 2022 – October 2022

- Built a Python tool using JSON config to auto-generate microservice folder structures, reducing setup time by 50% and errors by 80%.
- Integrated it into CI/CD workflows and enabled adoption across 2+ teams and 3+ live projects.

EDUCATION

AMC Engineering College, VTU, India | August 2019 – May 2023

- CSE | CGPA: 8.79/10.00

PROJECTS

AI Report-Insights Assistant | August 2026

- Built a Python CLI tool that applies rolling z-score anomaly detection to operational metrics and calls the Claude API to auto-generate plain-English executive summaries from the computed statistics.
- Designed the pipeline to mirror real automated-reporting workflows (Python + SQL), showing how an LLM-generated narrative layer can extend traditional BI/reporting systems.

Natural-Language-to-SQL Assistant | August 2026

- Built a CLI tool where Claude translates plain-English questions into SQL against an introspected database schema, then executes the query locally and returns results.
- Implemented a read-only safety guard that validates every AI-generated query (single statement, SELECT-only, blocklisted DDL/DML keywords) before execution.

Enhancing CCTV Surveillance for Face, Fall, and Fight Detection | December 2022 – March 2023

- Built a real-time surveillance alert system using computer vision (Python) to detect unfamiliar faces, falls, and fights.
- Integrated alert notifications via Telegram API, enhancing response time for security teams.

ACADEMIC AND EXTRACURRICULAR ACHIEVEMENTS

- Judge at National Hackathon, AMC Engineering College (Feb 2025) — evaluated innovative tech solutions and mentored teams on real-world problem solving and implementation strategy.
- Led "Intellects" Science Club, organizing tech talks, workshops, and peer-learning sessions to foster curiosity, collaboration, leadership, and communication.
- Conducted a hands-on GitHub Basics workshop for 50+ junior students, promoting version-control best practices and team collaboration.
- Managed a cross-functional team of 25+ members to organize and execute annual college fests, demonstrating coordination, multitasking, and stakeholder management.
- Silver Medalist, Inter-School Badminton Championship — demonstrating discipline, strategic thinking, and consistency under pressure.
